

Manure Application

DariTech has specialized equipment for all of your manure application needs.

If manure management is an integral part of your operation, then DariTech has the answer!

Injectors

DariTech offers a variety of injection equipment for several types of applications. The above is our “no-till” injector, which is ideal for applications that require minimum ground disturbance. Below is our “shank” injector which allows you to apply your manure and cultivate your ground in one pass, saving you time and money.

Injection Systems

Center to Out Drag Hose Pattern

Just that simple and efficient...

...station the Acurain Hose Reel in the middle of the field and simply drag the hose back and forth until the farthest corner is reached. The simplicity is in the design and the efficiency is the quality of the equipment.

Splash Booms

Splash booms have been an excellent addition to our manure application line. This option gives you the convenience of manure injection without opening the sod surface which can cause weed growth, a wider application path (up to 30') so you have less passes through the field, and less moving parts for less maintenance costs.

Hard Hose Drag

Dragging hard hose has many advantages over the traditional method of soft hose. Including: longer life, quicker hose retrieval, less hose twisting and easier pulling. Couple this with sturdy construction of the chassis, and you can stretch your investment dollars further. Our Acurain 4500M has 1320' of 5.512" OD X 0.591" wall HDPE hose that can cover over 65 acres in a single set.

Soft Hose Drag

DariTech offers several sizes of soft hose caddies for your individual needs and budgets. From our three point style which can hold three 660' pieces of hose, to our one mile trailer style which can hold eight 660' pieces, we have got you covered. All are hydraulic driven from your remotes in the tractor.

Acurain Travelers

Acurain irrigation reels come with different hose sizes and lengths to fit your needs. They come standard with a galvanized gun cart, electric start Honda motor, computer controlled and full hydraulic operation. The Acurain reel is setting a new standard in the industry.

Pump Drives

Our GreenLine pumps follow in the DariTech tradition of bringing value to dairies throughout North America by providing long wearing, highly efficient solutions to the many challenges that manure handling presents. Our pump line offers a broad selection of innovative features for demanding dairy applications. With the ability to configure our pumps for a wide range of flow rates, and manure consistency, we can handle manure pumping requirements of any operation.

Whether PTO, engine or electric driven, large or small, DariTech has the right pumps to get your manure out to your fields. Ask about how automation and radio controls can help you increase your efficiency.

Radio Controls & Flow Meters

Radio controllers can be customized to your pumping operation, resulting in further savings in labor and energy.

Endress Hauser flow meters provide reliable and accurate flow readings to ensure a proper ergonomical application rate.
