

2PIT

System

PATENT PENDING

Adapts to the Needs of Your Dairy

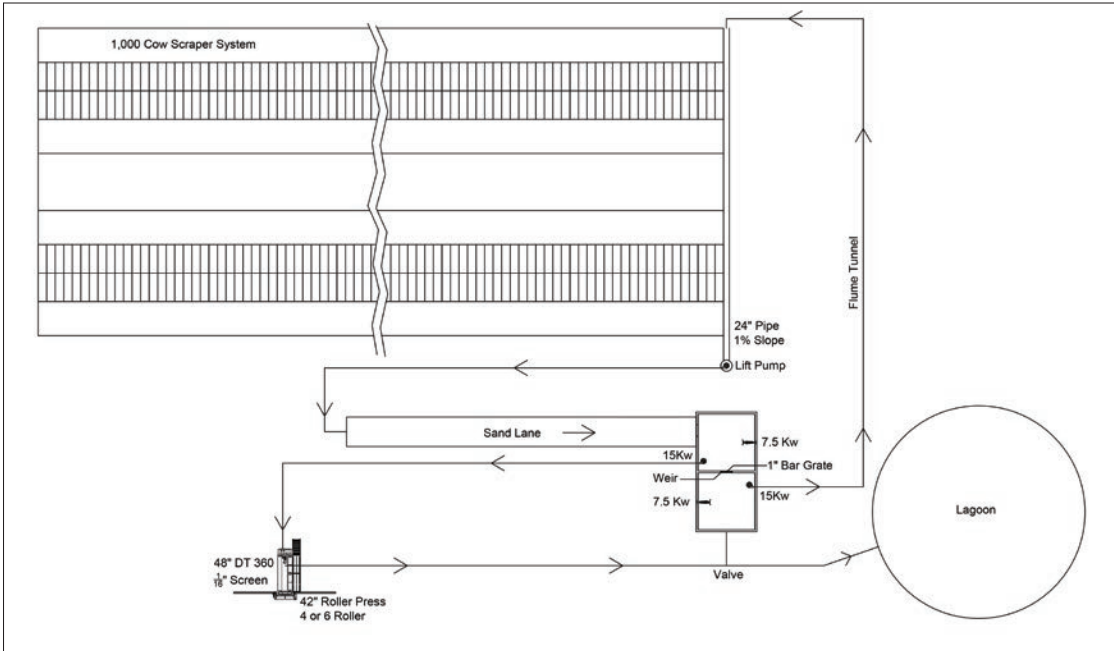

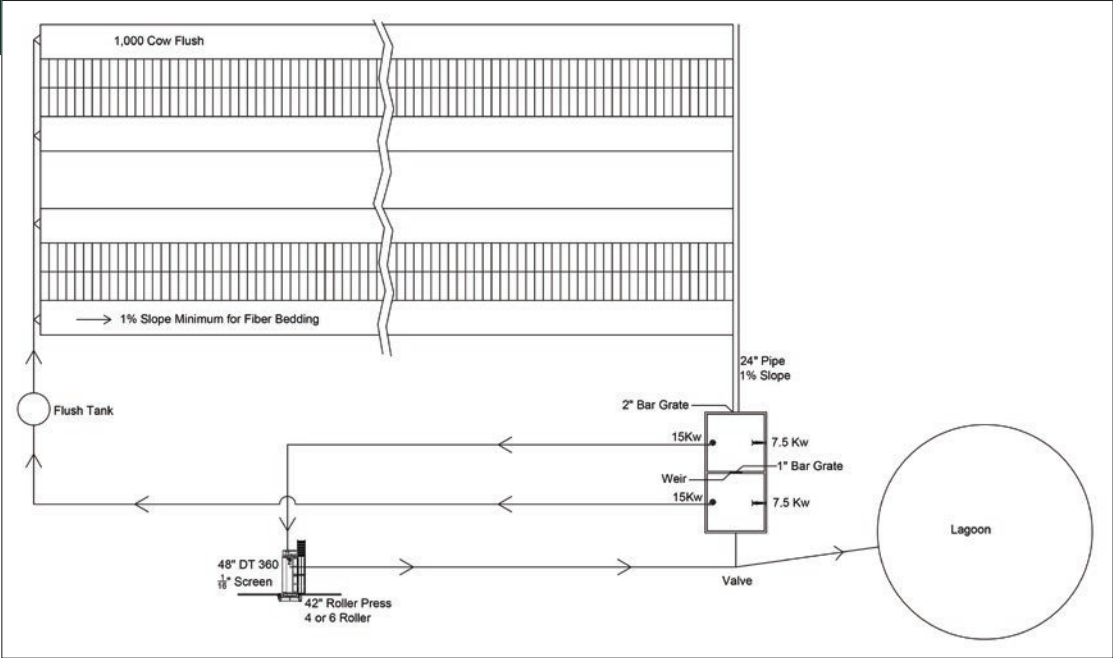

Patented Design

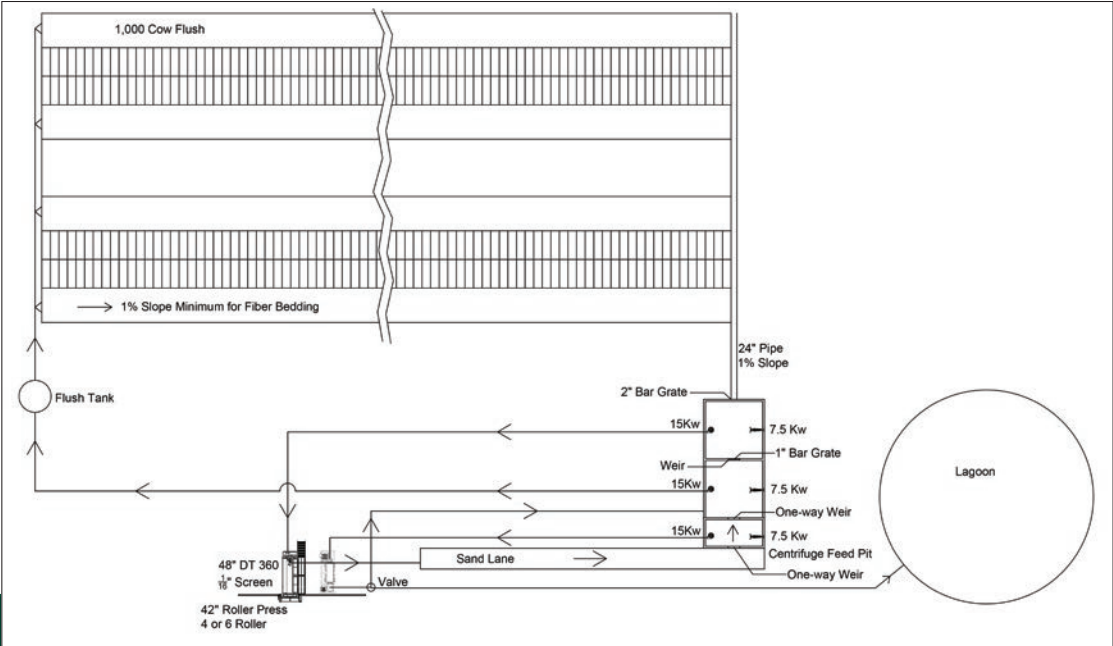

- 2-way WEIR design results in consistent flush water levels without the need for real time separation
- Cleaner flush water with less odor and reduced water usage
- High solids capture for cleaner lagoons
- Flexible and adaptable for multi-stage separation on flush or flume dairies
- Less equipment and low power usage

Typical 2-Pit Flush System

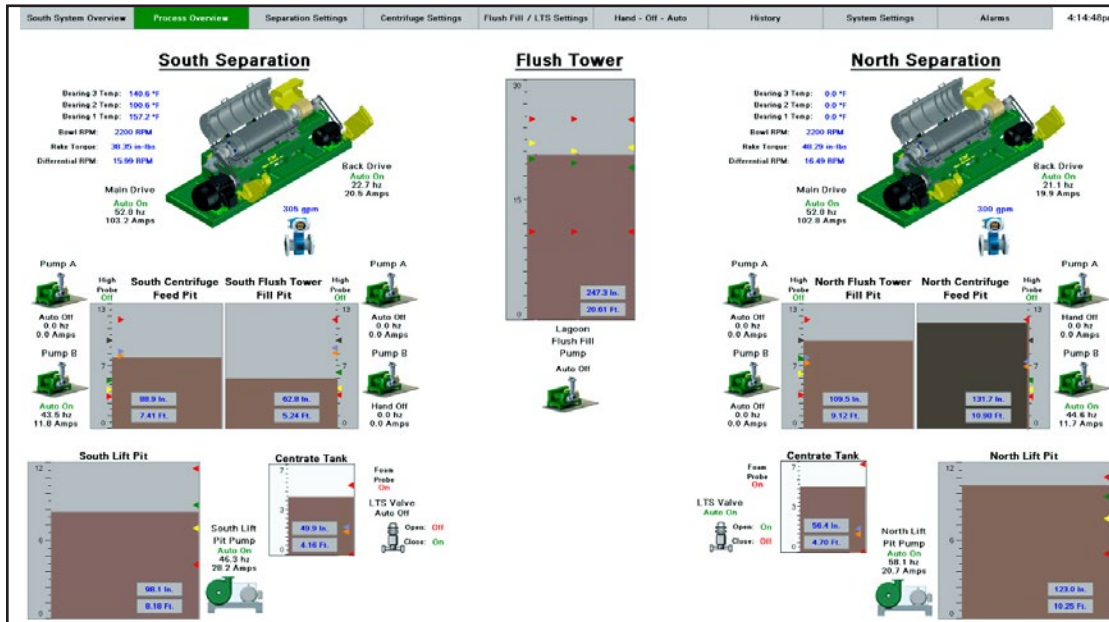

Typical 2-Pit Flume System with Lift Pump and Sand Lane

Typical 2-Pit Flush System with Centrifuge

Automated Controls

Built in our own ETL Listed panel shop, our industrial PLC touch screen interfaces provides high end control of all our automated equipment. Our systems can feature mobile device monitoring and control, text message alerts, and remote technical support.

Reliable Pumping

Utilizing Greenline pumps in our 2-Pit Systems brings together a new level of quality and reliability to the industry. Daritech has designed the E-series and AutoPrime pumps for easy installation and field service. Built with heavy galvanized tubes and mounting hardware, along with interchangeable components on all pumps and agitators.
